

Carbon Footprint Verification

Carbon Footprint Verification

With rising climate accountability, robust GHG emissions verification is essential for credible net-zero strategies. As an Independent verifier, our verification service delivers verification of your Scope 1-3 emissions inventories against ISO 14064 principles and frameworks such as GHG protocol, SBTi.

Beyond compliance, our verification process identifies methodological gaps and improvement opportunities in your emissions accounting systems. This verification empowers you to demonstrate your environmental impact and supports credible sustainability claims.

How Carbon Footprint Verification Works?

Carbon footprint verification ensures accurate GHG measurement across **Scopes 1–3 through data validation and Life Cycle Assessment**. Independent assurance aligns with GHG Protocol and ISO standards, boosting transparency and sustainability compliance.

Why Choose Normec Verifavia?

- **Independence:** Independent verification body with no consulting arm, ensuring unbiased assurance.
- **Expertise:** Experts with deep knowledge in emissions accounting and reporting.
- **Enhanced Stakeholder Confidence:** Demonstrates a strong commitment to environmental transparency and accountability, building trust with investors, regulators, and clients.

Process

1

Audit Preparation

Discuss assumptions and scope of emissions data

2

Verification

Check data and tracking methods against emissions report

3

Certification

Issuance of verification statement

4

Publication

Report your verified emissions in your sustainability report
