

From Indication Selection to Clinical Path Positioning Developed by 2 Bridge Tiger Team

Challenge

The client is a therapeutic biotech, focusing on the discovery and development of innovative medicines for patients suffering from central and peripheral neuropathies. 2 Bridge was brought on board to help the company to conduct an in-depth selection of the 4 preselected indication(s) and identify an appropriate clinical path to value generation for their candidate compounds.

Approach

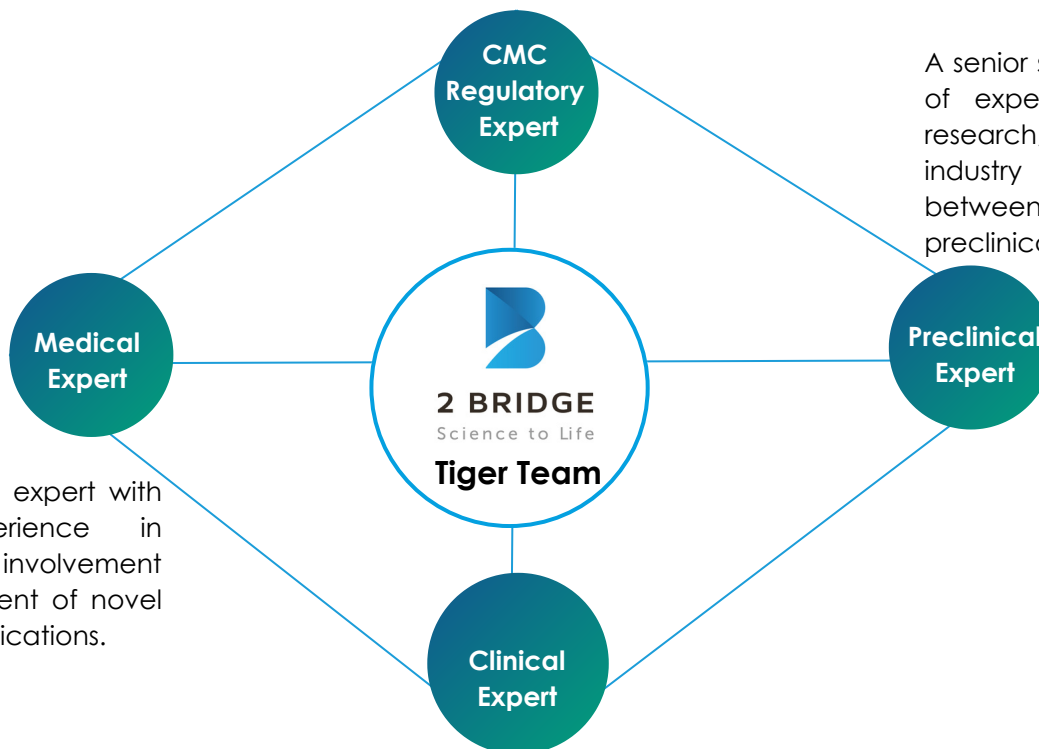

2 Bridge Tiger Team consisting of different disciplines acted as a one-stop provider that offers a complete service package from market research, KOL interaction, literature research, and scientific report to early clinical development plan.

Outcome

Together we developed a clear clinical positioning of assets and created a Clinical Development Plan from FIH up to Ph2a proof-of-concept studies in 2 preferred indications.

With a global view on development, the expert combines the biological and medical sides of a project, as well as its technical CMC dimension.

A senior scientist with 10 years of experience in oncology research, at academia and industry at the interface between clinical and preclinical research.
