

SFC CAS & MBM Specification Audit

SFC Conformity Assessment Scheme

The Smart Freight Centre Conformity Assessment Scheme offers independent evaluation on how well companies align with best practices in emissions reporting for freight transport. The scheme now covers both the **GLEC Framework** (for emissions accounting) and the **Market-Based Measures** (MBM) Specification, making it one of the most comprehensive verification pathways in the logistics sector.

ISO 14083 and the MBM Specification

ISO 14083 is the **international standard for quantifying and reporting GHG emissions** from transport chains. It formalizes best practices from the GLEC Framework and is now used for emissions disclosure, target setting, and climate reporting.

The MBM Specification supports transparent reporting of environmental benefits from instruments such as SAF certificates, renewable fuels, and book-and-claim mechanisms — ensuring claims are robust, traceable, and aligned with SBTi and other emerging standards.

Why Choose Normec Verifavia?

- **Dual-Scope Verification:** ISO 14083:2023/GLEC & MBM assessments.
- **Global Trust:** Trusted by freight industry leaders worldwide.
- **Sector Expertise:** Verifying emissions across all transport modes.

Process

1

Pre-Assessment

Scope review and alignment check

2

Document Review

Methodologies, activity data, and MBM evidence

3

Audit & Interviews

Sample tracing and system evaluation

4

Verification Statement

Aligned with SFC templates and ISO 14083

5

Review

Independent technical review of findings
